

Memory Management

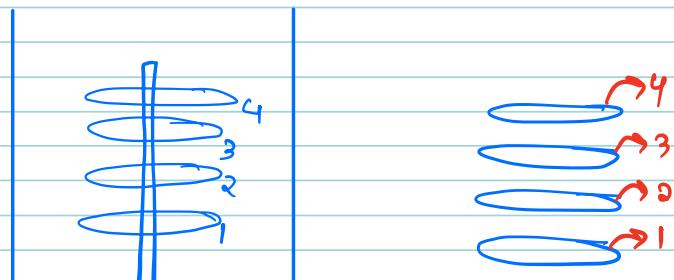

* Introduction about stack
 ↳ Basic Meaning

Some Examples

① stack of Books

② Idli Cooker

- * LIFO → Last in first out
- * Insert & Delete happens from top.
- * you always access of top most element.

Stack :- Container which follows above properties & hold data

Question :- what will be the output of this code.

```
int add( int x, int y ) {  
    return x + y;  
}
```

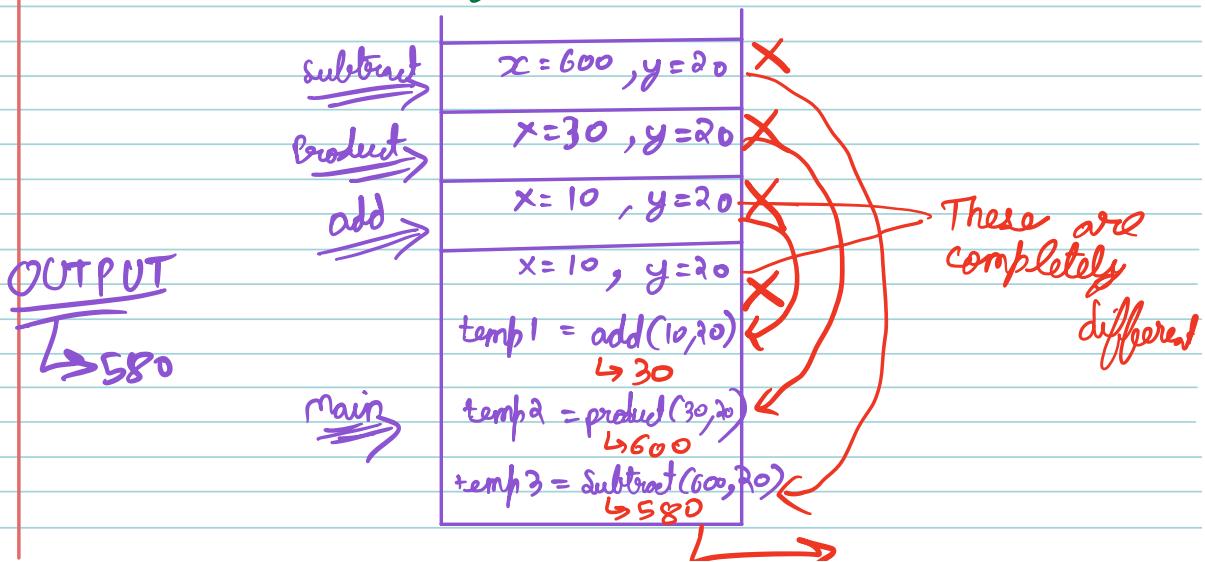

```
int product( int x, int y ) {  
    return x * y;  
}
```

```
int subtract( int x, int y ) {  
    return x - y;  
}
```

```
public static void main() {
```

```
    int x = 10;  
    int y = 20;  
    int temp1 = add(x, y);  
    int temp2 = product(temp1, y);  
    int temp3 = subtract(temp2, y);  
    sout(temp3);  
}
```

* Simple Dry Run \Rightarrow output : 580

Question :- Consider the below code:

```
int add ( int x , int y ) {  
    return x + y ;  
}
```

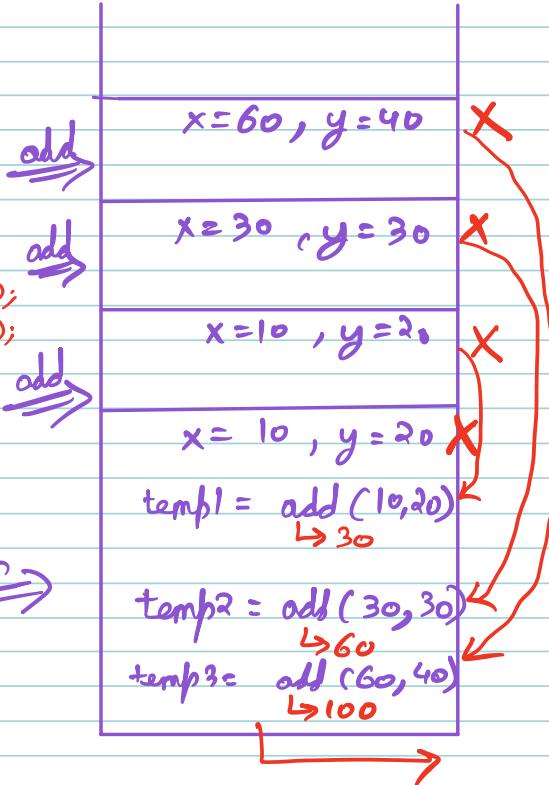

```
public static void main () {
```

- ✓ int x = 10
- ✓ int y = 20
- ✓ int temp1 = add (x,y);
- ✓ int temp2 = add (temp1, 30);
- ✓ int temp3 = add (temp2, 40);
- ✓ System.out.println (temp3);

OUTPUT

100

main

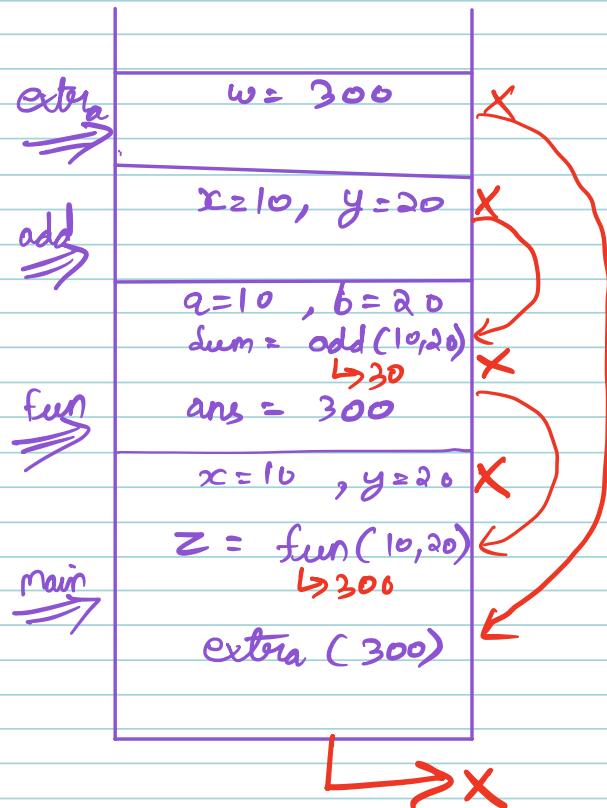

Question :- Consider the below code :-

```
int add ( int x, int y ) {  
    ✓ return x+y;  
}
```

```
static int fun ( int a, int b ) {  
    ✓ int sum = add ( a, b );  
    ✓ int ans = sum * 10;  
    ✓ return ans;  
}
```

```
static void extra ( int w ) {  
    ✓ sout ( "Hello" );  
    ✓ sout ( w );  
}
```

```
public static void main () {  
    ✓ int x = 10;  
    ✓ int y = 20;  
    ✓ int z = fun ( x, y );  
    ✓ sout ( z );  
    ✓ extra ( z );  
}
```

OUTPUT

300
Hello
300

Types Of Memories

→ whenever Java program runs, it takes space in RAM. This space is further divided:-

(1) Stack Memory :- All the primitive data type & reference will be stored in stack.

(2) Heap :- Container of that reference is stored in Heap. Arrays, ArrayList, objects are created inside Heap.

* Anything defined using "new" keyword creates object.

Question :- Consider the below code:-

Public static void main () {

✓ int x = 10;
✓ int [] arr = new int [3];
✓ sout (arr);
✓ sout (arr [2]);
✓ arr [1] = 7;

3

STACK

x = 10;
arr = 10 K

Main

Heap

10K	7
0	1
0	1

OUTPUT

10K
0

↳ Basics about the above Content.

- ① Primitives are stored in stack.
- ② References/addresses are stored in stack.
- ③ Objects are stored in heap.

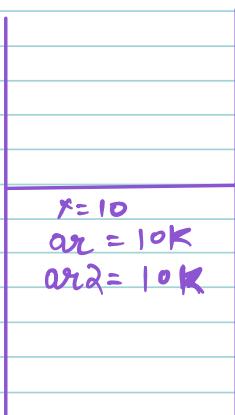

Question :- Consider the below code.

Public static void main () {

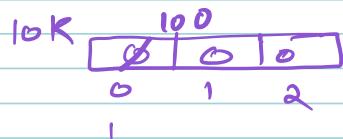

- ✓ int x = 10;
- ✓ int [] ar = new int [3];
- ✓ int [] ar2 = ar;
- ✓ ar[0] = 100;
- ✓ SOUT (ar);
- ✓ SOUT (ar2);
- ✓ SOUT (ar2[0]);

STACK

main

Heap

OUTPUT

10K
10K
100

Question Consider the below code

Public static void main() {

 ✓ int ar = new int[3];

 ✓ sout(ar)

 ✓ ar[1] = 4;

 ✓ ar[2] = 5;

 ✓ ar = new int[5];

 ✓ sout(ar);

STACK

main
→

Heap

OUTPUT

t0K
20K

Question: Consider the code below

```
static void fun (int[] a) {
```

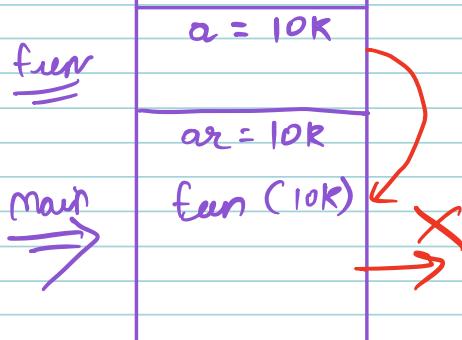

```
    ✓ SOUT(a);  
    ✓ a[1] = 5;  
}
```

```
public static void main() {
```

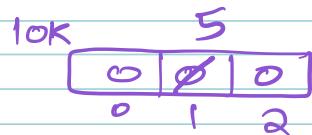

```
    ✓ int[] ar = new int[3];  
    ✓ SOUT(ar);  
    ✓ ar[0];  
    ✓ ar[1];  
    ✓ fun(ar);  
    ✓ SOUT(ar[1]);  
}
```

3

STACK

Heap

Output

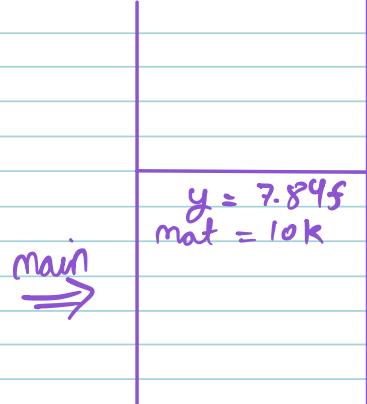

10K
10K
5

question :- Consider the code below

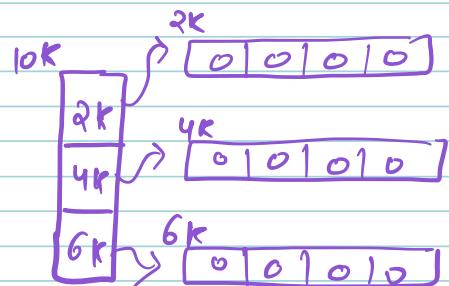

public static void Main() {

 ✓ float y = 7.84f;
 ✓ int[,] mat = new int[3,4];
 ✓ sourc(mat);
 ✓ sourc(mat[1]);
 ✓ sourc(mat[1,3]);
}

Stack

Heap

Output

10k
4k
0

Question :- Consider the code below

```
static int sumOfRow( int[] arr){
```

```
    ✓ sout( arr );
    ✓ int sum = 0;
    ✓ for ( i = 0; i < arr.length; i++ ) {
        |   sum = sum + arr[i];
    }
    ✓ return sum;
}
```

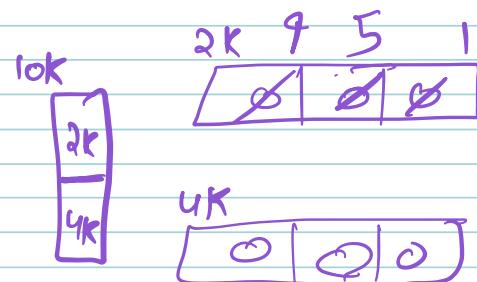

```
public static void main (){
```

```
    ✓ int [][] mat = new int [2][3];
    ✓ mat[0][0] = 9;
    ✓ mat[0][1] = 5;
    ✓ mat[0][2] = 1;
    → ✓ int ans = sumOfRow ( mat[0] );
    ✓ sout ( ans );
}
```

STACK

Sum of Rows	arr = 2K sum = 0/15
Main	mat = 10K ans = sum of Rows(2K) ↳ 15

Heap

Output \Rightarrow 15

IMP INFO

↳ In Java everything is pass by value.

↳ Pass by value means pass copy of data to function called.

Ex

fun (int[] A) {

 A = new int[5];
}

main () {

 int [5] A = new int[5];
 SOUT (A);
 fun (A);
 SOUT (A);
}

)

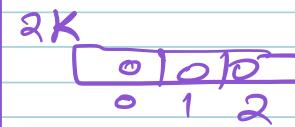

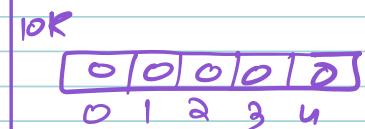

STACK

fun
====

Main
====

Heap

OUTPUT ⇒

10K

Ques :- Predict the output

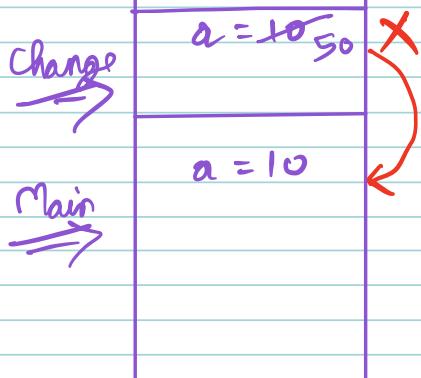

static void change(int a) {

|
3 ✓ $a = 50;$

public static void main() {

|
3 ✓ $int a = 10;$
✓ ~~change(a);~~
~~System.out.println(a);~~

Stack

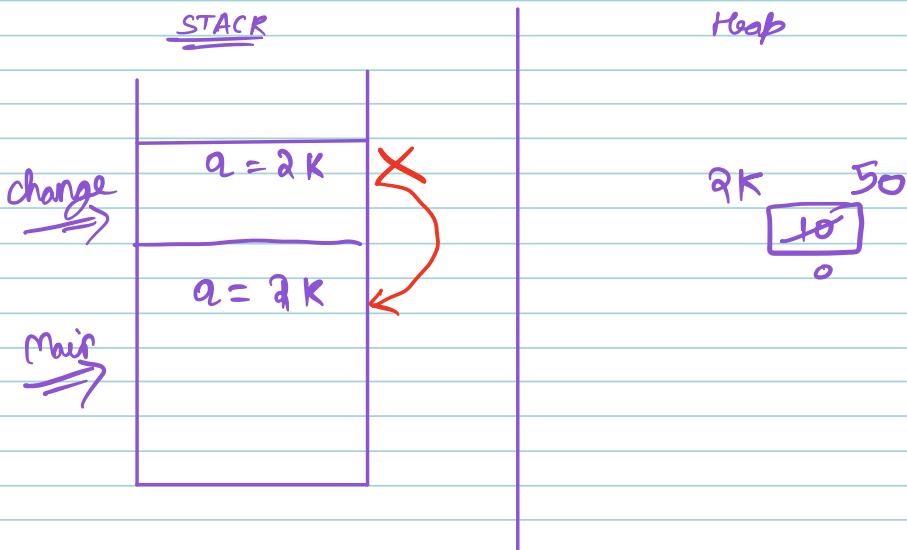

Heap

Output :— 10

Quiz :- Predict the output

```
void change ( int [ ] a ) {  
    |  
    | ✓ a[0] = 50;
```

```
    |  
    | Public static void main () {  
    |  
    |     | ✓ int [ ] a = { 10 };  
    |     | ✓ change ( a );  
    |     | ✓ sout ( a[0] );  
    |  
    | }
```

Output :- 50

Quiz 3 : Predict the output

void test (int [] a) {

$\rightarrow \checkmark a = \text{new int}[1];$

$\rightarrow \checkmark a[0] = 50;$
 \exists

 public static void Main() {

$\checkmark \text{int}[1] a = \{10\};$

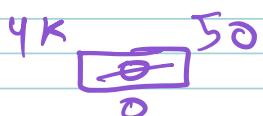

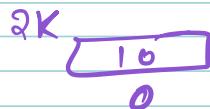

$\checkmark \text{test}(a);$

$\checkmark \text{sout}(a[0]);$
 \exists

STACK

Heap

Output : 10

Quiz 4

Predict the output

void fun(int[] a) {

$a = \text{new int}[1];$
 $a[0] = 100;$

public static void main()

✓ int[] a = {10, 20, 30};

✓ `fun(a)`

✓ `SOUT(a[0]);`

STACK

fun

$$a = \cancel{2k} \quad \cancel{qk} \quad \times$$

Main

$$a = 2K$$

~~feen (2 k)~~

Heads

27

10	20	30
0	1	2

4K 100

OUTPUT :- - 10

Ques 5 :- Predict the output

void Swap (int a, int b) {

 ✓ int temp = a
 ✓ a = b;
 ✓ b = temp;

 3
 public static void main () {

 ✓ int a = 10;
 ✓ int b = 20;
 ✓ swap (a, b);
 SOUT (a + " " + b);

 3

STACK

Heap

Swap

a = 10	20
b = 20	10
temp = 10	
a = 10	
b = 20	
Swap (10,20)	

Main

OUTPUT : 10 20

Ques 6 : Predict the output

void Swap (int [] a, int [] b) {

 ✓ int temp = a[0];

 ✓ a[0] = b[0];

 ✓ b[0] = temp;

public static void main () {

 ✓ int [] a = { 10 };

 ✓ int [] b = { 20 };

 ✓ Swap (a, b);

 SOUT (a + " " + b);

 ✓ SOUT (a[0] + " " + b[0]);

STACK

Swap

a = 2K
b = 4K
temp = 10

a = 2K

b = 4K

Swap(2K, 4K)

Heap

2K 20
 10
 0

4K 10
 20
 0

Output

20

10

Ques 7 :- Predict the output

int[] fun (int [] a) {

 ✓ a = new int [2];
 ✓ a[0] = 50;

 ✓ a[1] = 60;

 ✓ return a;

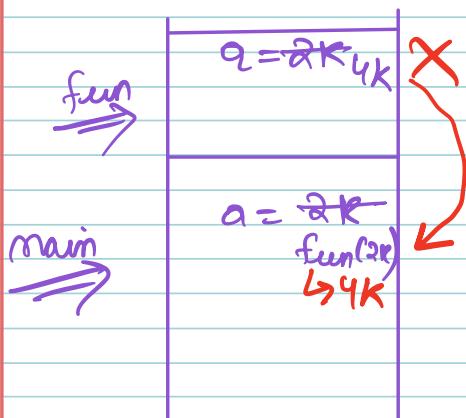

public static void main () {

 ✓ int [] a = { 10, 20, 30 } ;

 ✓ a = fun(a)

 ✓ sout (a[0]);

Stack

Heap

Output : 50

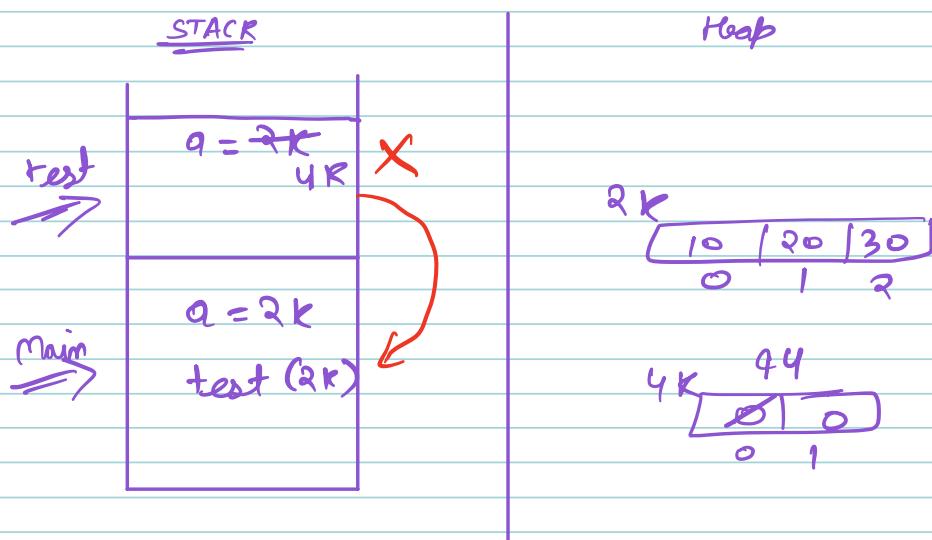

Quiz 8 :- Predict the output

void test (cit [] a) {

✓ $a = \text{new int}[2];$
✓ $a[0] = 94;$

Public static void main () {

✓ `int[] a = {10, 20, 30};`
✓ `test(a);`
✓ `sout(a[0]);`

Output : 10
